2. Authorization for this examiner's amendment was given in a telephone interview with Applicant's Representative (Joan Arbolante, Reg No. 58, 642) on 8/12/2009.

3. The application has been amended as follows:

In the Claims:

Please AMEND claim 1 as follows:

1. (Currently amended) In a messaging system, a method for restoring media items to an original quality, the method comprising:

upon receipt of a message containing a media item having original resolution quality by a switching center, storing the media item having original resolution quality in a repository by a server;

embedding the identifier in the media item having original resolution quality stored in

Art Unit: 2451

the repository by the server;

replacing the media item in the received message with a copy of the identifier-embedded media item having original resolution quality stored in the repository by the switching center; and

upon future encounter by the switching center of a message sent by a source node to a destination node, wherein the source node is different from the destination node, the message containing an identifier-embedded media item no longer having original resolution quality ~~by the switching center~~, substituting, by the switching center, the identifier-embedded media item no longer having original resolution quality in the encountered message with a copy of the identifier-embedded media item having original resolution quality stored in the repository using said identifier.

Please AMEND claim 30 as follows:

30. (Currently amended) A memory storing downloadable set of processor-executable instructions for performing the method of claim 1.

Please AMEND claim 31 as follows:

31. (Currently amended) A system for restoring media items to original quality, the system comprising:

a module for generating an identifier for identifying the media item having original resolution quality stored in the repository and for embedding the identifier in the media item having original resolution quality stored in the repository;

a module for replacing the media item having original resolution quality in the message with a copy of the identifier-embedded media item having original resolution quality stored in the repository; and

a module for substituting an identifier-embedded media item no longer having original resolution quality in a message sent by a source node to a destination node, wherein the source node is different from the destination node, with a copy of the identifier-embedded media item having original resolution quality stored in the repository using said identifier.

Allowable Subject Matter

4. Original Claims 1-4, 7-34 and 37-58 are renumbered 1-54 respectively. Original Claims 5-6 and 35-36 are cancelled.

5. The following is an examiner's statement of reasons for allowance:

The Office has deemed Applicant's latest claim amendments and associated remarks persuasive to overcome the rejection under the prior art references with respect to the following amended claim features:

In a messaging system, a method for restoring media items to an original quality, the method comprising:

upon receipt of a message containing a media item having original resolution quality by a switching center, storing the media item having original resolution quality in a repository by a server;

generating an identifier for identifying the media item having original resolution quality stored in the repository by the server;

embedding the identifier in the media item having original resolution quality stored in the repository by the server;

replacing the media item in the received message with a copy of the identifier-embedded media item having original resolution quality stored in the repository by the switching center; and

upon future encounter by the switching center of a message sent by a source node to a destination node, wherein the source node is different from the destination node, the message containing an identifier-embedded media item no longer having original resolution quality substituting, by the switching center, the identifier-embedded media item no longer having original resolution quality in the encountered message with a copy of the identifier-embedded media item having original resolution quality stored in the repository using said identifier.

Specifically, Applicants remarks that none of the cited art teaches or suggests the recited feature of “upon future encounter by the switching center of a message sent by a source node to a destination node, wherein the source node is different from the destination node, the message containing an identifier-embedded media item no longer having original resolution quality substituting, by the switching center, the identifier-embedded media item no longer having original resolution quality in the encountered message with a copy of the identifier-embedded media item having original resolution quality stored in the repository using said identifier”, as recited in claim 1, is found persuasive.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Glenford Madamba whose telephone number is 571-272- 7989. The examiner can normally be reached on Monday-Friday 7:00AM-4: 30PM, first Fridays OFF.
